

PropShield Risk Shield Manager User Guide Version 1.2

Welcome

Risk Shield Manager is an account protection tool designed to help traders automatically enforce their risk management rules. It works with the PropShield Signal Panel and Adaptive Copier to monitor supported trades and help protect your trading accounts.

What Risk Shield Manager Does

Risk Shield Manager does not generate trades or trading signals. It monitors supported PropShield trades and enforces the protection rules you configure, helping you stay within your personal or prop firm risk limits.

Compatibility

- ✓ PropShield Signal Panel
- ✓ PropShield Adaptive Copier
- ✗ Manual Chart Trader Orders
- ✗ ATM Strategies
- ✗ Third-party Strategies
- ✗ Third-party Trade Copiers

Only trades executed through the PropShield Signal Panel or Adaptive Copier are managed.

Requirements

- Install the PropShield Toolkit.
- Install the PropShield Signal Panel and/or Adaptive Copier.
- Enable the **Trailing Drawdown** column in the NinjaTrader Accounts window.
- Verify the Trailing Drawdown value updates correctly.

Important: Risk Shield Manager reads the Trailing Drawdown value directly from NinjaTrader. If the column is hidden, trailing drawdown protection cannot function.

Key Features

- Protect multiple accounts simultaneously.
- Daily Loss and Daily Profit protection.
- Trailing Drawdown monitoring.
- Account Lock and Auto Flatten.
- Customizable on-screen popup alerts.
- Multiple saved protection profiles.
- Continues running in the background after profiles are enabled and saved.

Getting Started

1. Install the PropShield Toolkit.
2. Activate your license.
3. Download Risk Shield Manager.
4. Import into NinjaTrader.
5. Enable the Trailing Drawdown column.
6. Configure your protection profiles.
7. Enable and save each profile.
8. Test in Simulation before trading live.

Background Operation

After your profiles have been enabled and saved, the Risk Shield Manager window may be closed. Protection continues running in the background using your saved settings. Configured on-screen popup alerts notify you when protection events occur. Reopen the window anytime to review status, modify settings, or manage profiles.

Diagnostics & Support

Risk Shield Manager automatically creates diagnostic log files during operation. These logs may include protection events, account monitoring activity, profile actions, warning and error messages, and other diagnostic information.

If you need assistance, the PropShield Toolkit can automatically collect the Risk Shield Manager logs into a Support Package for submission to PropShield Support. Providing a Support Package helps our team diagnose and resolve issues more quickly.

For detailed setup videos, walkthroughs, updates, and support, visit the PropShield YouTube channel and Discord community.

Risk Disclosure

Trading futures involves substantial risk. Risk Shield Manager assists with enforcing your configured protection rules but cannot eliminate trading risk. Always test thoroughly before using live capital.
