PropShield

UniRenko Trend Levels User Guide

Version 1.1

Welcome

UniRenko Trend Levels is a discretionary trading indicator designed to help futures traders identify high-probability trend opportunities using objective market structure and dynamic price levels. Rather than generating automatic buy and sell signals, it provides a clean visual framework to help traders recognize trend direction, support and resistance, and potential continuation or reversal areas.

Features

• **Trend Levels** – Dynamic support and resistance that adapt to changing market conditions.

• **Core Levels** – Objective price levels that help identify potential support, resistance, and reaction zones.

• **Trend Detection** – Visual guidance that helps identify the current market direction and potential trend changes.

Recommended Usage

Instrument: NQ

Chart: UniRenko (40/20/120 Recommended)

Getting Started

Installation

1. Install the PropShield Toolkit.
2. Activate your license.
3. Download UniRenko Trend Levels.
4. Import into NinjaTrader.
5. Add UniRenko Trend Levels to your chart.

First Steps

• Begin with the default settings.

• Use Market Replay before trading live.

• Learn to read Trend Levels and Core Levels together.

• Focus on market structure instead of predicting every move.
